- Play the clip with a finger tip - with RARtouch

The combination of a DOREMI Labs. Random Access Digital Disk Recorder V1 or V1D with the unique RARtouch controller and the software RAR4V1 offers a new operation power for the Disk Recorder. Clips can be selected and played randomly only by a smooth touch with your finger tips on one icon or combined to built a list for playing clips seamless back to back.

The RARtouch Controller and the DOREMI Labs. V1Disk Recorder

We have developed the software RAR4V1 to control the DOREMI Labs. V1's in their native protocol over the RS422, Ethernet or SCSI port. It supports list management and looping of single clips or a complete list of clips, which could include each specific clip more than once in any order.

The Graphic User Interface of the RARtouch Controller

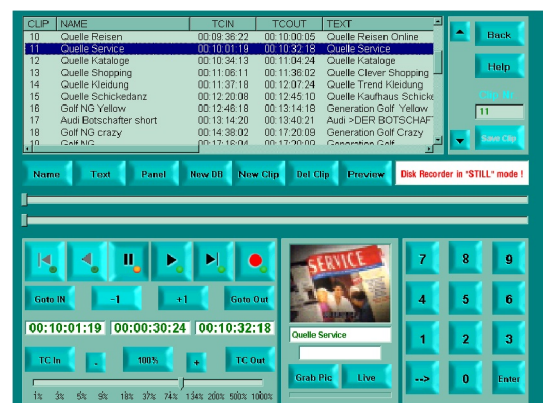

The GUI is designed to run on the intelligent touch screen device RARtouch 5000 from PTV Professional TeleVision. The software module RARplay allows to select each clip and play them immediately by a touch on the icon. "Drag'n'Drop" any clip icon to the film icon could create a list of clips. A playtime indicator shows the position of the current clip as a bar graph. Additional a timecode display and an alphanumeric window inform about the time and the title. If the database contains clip comments, RAR4V1 will show them in a special display.

All Clip Information is stored in the RARtouch Database

The RARbrowser offers the access to the database on the system hard disk. Here clips could be selected and arranged with "Drag'n'Drop" to the play buttons or in the film list. The data format is open and could be read or written with third party software.

Edit your own style of Clips on the RARtouch

In the RAReditor the clip editing will be done. If the DOREMI Labs. V1 is connected via Ethernet pictures can be taken from the video on the V1 to create the icon for the RAR4V1. Optional a video grabber tool is available as a plugin. The RARdatabase is easy to create with the built-in tools and looks like a dBase file.

RARtouch 5000 Technical Specification:

- Screen: 13,5" TFT activ color LCD sensitiv screen
- Interfaces: 3x RS232/422 with V1 protocol
 1x Ethernet 10 baseT on JT45
 1x Keyboard and external Mouse
- Processing: Intel Pentium CPU with 32 MB RAM
- Power: Power supply 110-240 V 50-60 Hz apr. 20 W
- Dimensions: 310 (W) x 260 (H) x 105 (D) mm, plus stand
- Weight: fully equipped approximatly 4 kg

Made in Germany.
